PRODUCT NEWS

CS - II EQUIPMENT CASES

PURPOSE

Union Switch & Signal offers a new line of COR-TEN® Steel Equipment Cases providing increased versatility and easier installation. They can be ordered empty or they can be fitted with back-boards, shelves, tag boards with wire chases and relay mounting bars. They have been designed for greater strength and better weather and dust proofing properties to protect your equipment.

DESCRIPTION

The new CS-II Equipment Cases, made of COR-TEN steel, are highly resistant to atmospheric corrosion and rust, and possess structural steel strength 40% greater than mild steel. They will provide many years of maintenance free service.

Full size locking doors are provided on both front and back having heavy duty handles, screened vents, and can be held in the 90° open position. Center latching is supplemented by latching dogs at top and bottom, except the 17½'' case which has single latching.

Knockouts are provided at the top of the end panels for aerial cable entry. The bases may be ordered with circular cable knockouts or rectangular slots for accommodating cable chutes.

Shelving brackets are welded integrally to the case and are of the button hole type for easy shelf placement. Shelves can be positioned in vertical increments of 3'' with a minimum of 6'' between shelves. The front shelves measure 12'' deep while the rear shelves measure 10''. Tag boards with wire chases may also be mounted on the shelf brackets as well as relay mounting bars. Either a full backboard or a half backboard is available. Backboards can be centered from front to back or mounted toward the back with all equipment space in front.

The smaller 17½'' wide case is available in two versions. One is a pole mounted unit having a single front door and the other is designed for mounting on a foundation. The 17½'' case features one shelf.

® COR-TEN is a registered trade name of U. S. Steel Corp.

All interior hardware such as shelves, backboards etc. may be ordered for user assembly, or may be factory assembled prior to shipment. Factory wiring is also available if desired.

Cases are available either painted or unpainted. If painted, the interior is of gray enamel while the exterior is of long wearing aluminum. Foundation mounting is by external bolting to slotted flanges to facilitate installation.

FEATURES

- **Made of COR-TEN steel for greater strength and longer maintenance free service.**
- **Shelves feature easy installation due to slip-in button hole arrangement.**
- **Plug in relay bars can be spaced to accommodate relays of other manufacturers.**
- **Lifting eyes are standard for easy placement.**
- **Improved door gaskets for longer life and better sealing.**
- **Aerial and underground cable knockouts are available.**
- **Easier installation due to external mounting flanges.**
- **Cases may be specified to your exact requirements.**
